

Question: How can I enlarge my view of Coeus?

Answer:

You can decrease your computer's screen resolution, which will enlarge your view in Coeus. Note: This will enlarge the view of other applications used on your computer outside of Coeus as well.

Windows 7

1. Right-click anywhere on your desktop and select "Screen Resolution".
2. If you have a single monitor, you can skip to step 3. If you are using multiple monitors, select the desired monitor for "Display". If you are not sure which monitor is which you may click on the "Identify" button, which will display a large number on each monitor.
3. For "Resolution", lower the slider to decrease the resolution setting. This will enlarge the entire view of your desktop.

4. Click "Apply". You will see a message asking you if you would like to keep your display settings. Check that your view in Coeus has been enlarged to your liking and select "Keep Changes" if satisfied. If you would like to further adjust your resolution, just allow the timer to run out or select "Revert" until you find a resolution that works for you.
